Too much data, too little insight?

DataSelf uses a unique combination of data optimization, BI tools, and a **library of analytics for superior business insight.** A 'single version of the truth' enables management and executives to make the **most informed business decisions.**

POWER via Auto-Configuration & Data Optimization

The core component is **DataSelf ETL+**, the most advanced data optimization and data warehousing technology on the market. It simplifies and expedites the report design and production process for Acumatica and all your business apps – individually and blended.
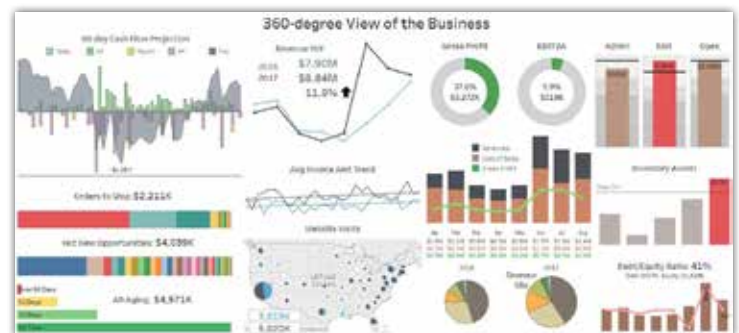

EASE-OF-USE via Top Analytical Tools

DataSelf works with the top BI Technologies: **Tableau, Microsoft Power BI, and Microsoft Excel** to enable infinite drill-down and slice-and-dice.

Additionally, DataSelf includes a natural language query interface ('NLQ') – a Google-like search that lets users specify selection criteria using plain English.

SPEED via Library of Analytics for Acumatica

DataSelf includes the **largest library of analytical reports, dashboards, and KPIs** in the BI market.

From year-over-year sales variances and predicting potential inventory shortages, to forecasting future cash-flow; **reports run in less than 10 seconds** making it easier and faster to get to the bottom line.

BI-based Reporting is **up-and-running in under a day** and affordably priced for companies of all sizes.
